

KM SME Review edit

a database created by Janet Lewis on 17 May 10

[new entry](#)**Welcome to the SME Review Area**

This area is used to vet specific content / questions related to external consumers (e.g., Regenstrief) integrating with the KM content for the CDSC rules.

Please provide your comments on the items that are listed with a Status of *Open*.

Notes

- If input from the external consumers is required, it will be handled outside of this area.
- Changes which impact the legacy reminders need to be discussed with the KM / LMR team.

	No.	Topic	Status	Description	Resolution
	Closed 14				
	1	Esophageal varices	Closed	Are esophageal varices an absolute, relative or not a contraindication to Anti-Platelet Therapy? The GI Bleeding subset is a contraindication for anti-platelets in the CDSC rules, but the Esophageal Varices subset is not. If it is an absolute contraindication, then we will update the rules to suppress the reminder to begin an anti-platelet in patients with CAD not already on ASA, Plavix, or Ticlid. If Esophageal Varices are considered a relative contraindication to anti-platelet therapy, the rules will be updated so the "Consider Anti-Platelet Therapy - Contraindications present" message will be displayed for patients with coronary artery disease and esophageal varices on their problem lists.	6/21/10: Tagged this subset as AHRQ. Will update rules after ILOG 7 upgrade.
	2	Gastric varices	Closed	Are gastric varices an absolute, relative or not a contraindication to Anti-Platelet Therapy? The current CDSC rules treat any condition defined in the GI Bleeding subset, but not in the Gastric Varices subset, as a contraindication for antiplatelet therapy, thereby suppressing the reminder to start an anti-platelet in patients with CAD who are not on ASA, Plavix, or Ticlid. If Gastric Varices is a contraindication, then we will refine the rules to suppress the reminder for these patients as well. If considered a relative contraindication, the rules will be updated to present the "Consider Anti-Platelet Therapy - Contraindications present" message will be displayed for patients with coronary artery disease and gastric varices on their problem lists.	6/21/10: Tagged this subset as AHRQ. Will update rules after ILOG 7 upgrade.
