A Clinical Decision Support Consortium Demonstration:

From Rule Authoring, to Knowledge Repository and Portal, to Two Different EMRs:

Partners Healthcare and the Regenstrief Institute

November 15, 2010 AMIA 2010 Annual Symposium

Agenda

- Welcome and Introductions
- CDS Consortium Goal and Approach
- Demonstration
 - 1. Rule Authoring
 - 2. Knowledge Representation
 - 3. Sharing via Knowledge Repository
 - 4. Actionable CDS via Web Services
 - 5. Expression of CDS
 - 6. Measuring CDS and Providing Feedback
- Discussion/Q&A

AHRQ's Goals for Advancing Clinical Decision Support

- To facilitate the development, adoption, implementation and evaluation of best practices using CDS.
- To further enhance the nation's efforts to make evidence-based clinical knowledge more readily available to health care providers.

Blackford Middleton, MD, MPH, MSc

CDS Consortium Goal

To assess, define, demonstrate, and evaluate best practices for knowledge management and clinical decision support in healthcare information technology at scale – across multiple ambulatory care settings and EHR technology platforms.

CDSC Six Research Objectives

- Knowledge Management Lifecycle
- Knowledge Specification
- Knowledge Portal and Repository
- CDS Knowledge Content and Public Web Services
- Evaluation
- Dissemination

1. Knowledge Management Lifecycle

2. Knowledge Specification

- 3. Knowledge Portal and Repository
- 4. CDS Public Services and Content
- 5. Evaluation Process for each CDS Assessment and Research Area
 - 6. Dissemination Process for each Assessment and Research Area

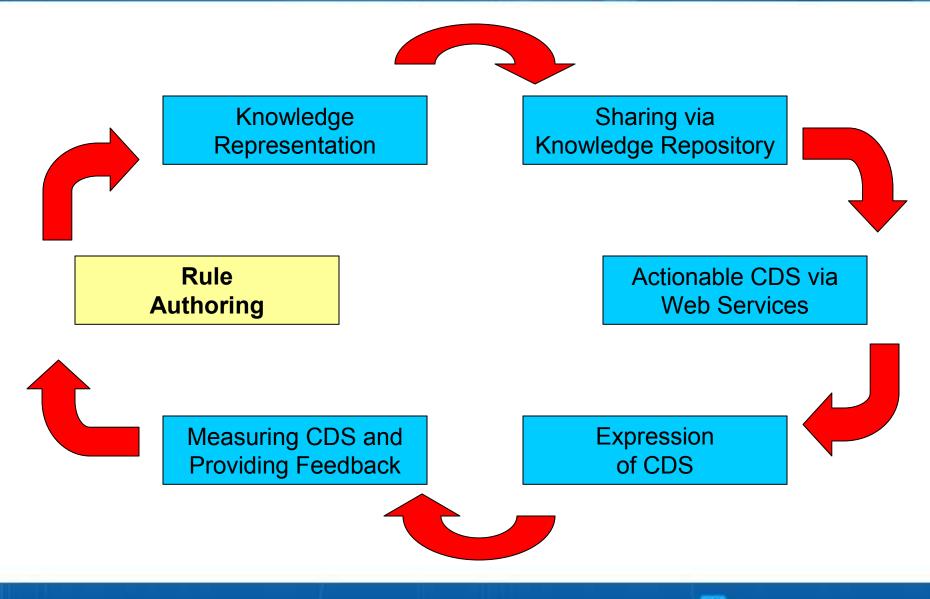

Transforming Rules from Narrative

 Narrative form of guideline to control A1c for Type 2 diabetes

Action	Frequency
A1c	Every 6 months if controlled (A1c <7%) and therapy/clinical
	circumstances remain unchanged
	Every 3-6 months if uncontrolled (A1c ≥7%) and/or
	evaluating change in treatment

Saverio Maviglia, MD, MSc

Multilayered Framework

Implementation

Structured Recommendation

Semi-Structured Recommendation

Unstructured Recommendation

Unstructured Recommendation layer

- Semi-Structured Recommendation layer
 - | Structured Recommendation layer
- Implementation layer
 - Knowledge is structured for use within a specific type of CDS
 tool at a particular clinical site
 - Knowledge encoded in a format that can be rapidly integrated into a CDS tool on a specific HIT platform
 - E.g., rule could be encoded in Arden Syntax

A recommendation could have several different artifacts created in this layer, one for each of the different HIT platforms

Live Demonstration of Authoring Tool

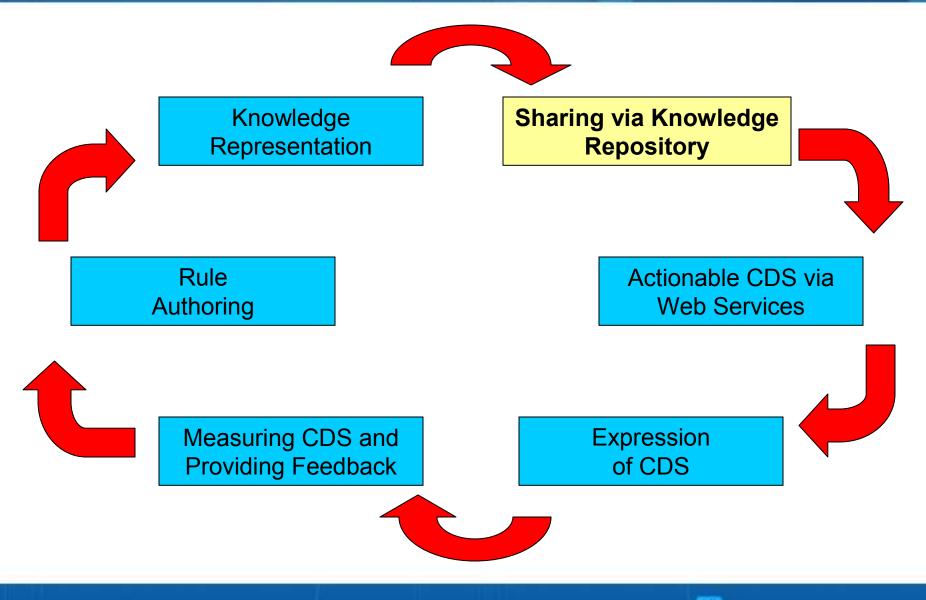

CDSC KM Portal Overview

- The CDSC KM Portal is a combination of 3 components:
 - Virtual collaboration space (EMC-Documentum eRoom)
 - Content Management and Publishing Services (EMC-Documentum CMS and Web Publisher)
 - Clinical Decision Support Library a document repository for sharing Clinical Decision Support content
- Types of Documents searchable by robust metadata:
 - Level 1 Unstructured (human readable guideline)
 - Level 2 Semi-structured (XML)
 - Level 3 Structured (XML) includes relevant encoding information
 - Level 4 Implementation specific content
 - Executable: content executed by or imported into a system
 - Exportable: content exported from a system
 - Description: content describes an implementation
 - · Illustration: content illustrates an implementation

CDSC Services Checklist

- Capable to generate C32-compliant CCD
- Validate data definition alignment
- Complete data-sharing and services agreement
- Integrate web service at desired insertion points
- **End-to-end testing**
- Begin production use

CDSC Action Request Model

Purpose

- Allows guideline creators to specify discrete parameters of the action
- Enables client application to transform the structured action into an order

Requirements

- Allow related action requests to be grouped
- Indicate how action requests might be selected by end users
- Allow specifying a broad class of an action rather than a specific implementable action
- Allow flexible specification of attributes, i.e., ranges of values, null or empty values
- Allow an action request to modify or cancel an existing action.

CDSC Recommendation Object

- Recommendation contains
 - Metadata
 - Action
- Action contains
 - 1:n Request Lists
- Request List contains
 - 1:n Requests of any type
 - 0:n Request Lists
 - Display operator (and/or)
- Request contains
 - Structured data specific to the request type
 - Display message
 - Text alternative, for use instead of structured data

- Request Types
 - Encounter
 - Substance Administration
 - Message
 - Clinical State
 - Observation
 - Knowledge Asset
 - Procedure
 - Supply
 - Event
- Data Structures are
 - Consistent with Patient Information Model
 - Conformant to HL7, HITSP terminology standards

CDS Designer View – "How well are the reminders working?"

- Displayed (Counts)
- Acknowledged (%)
- Performed (%)
- Number Needed to Remind (NNTR)

Report: CDS Dashboard - Reminder Designer View Report Run For: EINBINDER, JONATHAN SETH, M.D., M.B.A.

Multiple time period view

Condition: Diabetes

ReminderID: 178-Diabetic overdue for HbA1C Measure: Diabetes, HbA1C completed in the past 6

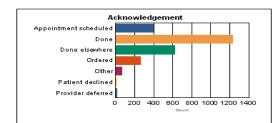

Reminder: Patient with DM overdue for HbA1C (rec: q 6

Data: All users of LMR. From 1-09 thru 9-10.

Total Performance is the clinical performance for the measure across all LMR patients in the denominator for that period. The patient is counted in the numerator if the patient record shows compliance with the measure's numerator criteria within 30 days of the reporting period.

Reminder Performance is the performance for patients where a reminder was displayed to a physician during the reporting period. The denominator is reminders (one per provider / day). If the patient clinical data shows that the criteria for the measure is met within 30 days of the period then the performance is counted in the numerator.

Total Count Displays (across providers): 713,720

#Patient (months) with reminders displayed: 183,889

#Patient (months) w/ reminder and perf: 33,167 #Patient (months) w/ reminder and no perf: 150,722

#Reminders acknowledged: 2,105

NNTR (Total): 21.52

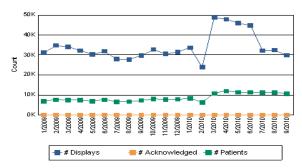

NNTR (1X per month): 5.54

#Reminders acknowledged and perf: 1,220

#Reminders acknowledged and no perf: 885

NNTR is number needed to remind. The denominator is the count where performance followed a reminder within 30 days of the end of the reporting period. The numerator is the cumulative count of all reminders per patient in each month(Total) or only counts a patient with a reminder once per month

(1X per month).

Displays is the count of displays for the reminder during the time period. Note that reminders are counted once per day for each physician such that multiple displays for the same provider on the same day are not counted but multiple providers

Acknowledged is the count of displayed reminders where there was an acknowledgement through the LMR reminder tool

Patients is the total number of patients that reminders were displayed to. Note: When counting patients across months the concept of a "patient(month)" is needed to cover for duplicate patients that appear in more than one period.

Report: CDS Dashboard - Reminder Designer View Report Run For: EINBINDER, JONATHAN SETH, M.D., M.B.A.
